

8 Web Services

In order to share data between devices over Internet, Web Services is the solution.

In ASP.NET there are several alternatives for creating such Web Services.

See the Tutorial “Web Services with Examples” for more details.

Visual Studio and ASP.NET has powerful features for creating Web Services:

- ASMX Web Service (Traditional Web Service using SOAP)
- ASP.NET Web API (The modern Web Service using REST, Web 2.0)
